

Arena Divider System Set-Up

2018

Set Up from Gate

Notes

- Allow Facility Attendants to get cart to ice
- Position cart near center ice
- Put curved end panels in place
- Put small panel to side at opposite end you are starting from
- Pull panels off cart with plug
- Small panel must be last before curved end pieces

Moving for Ice Flood

Notes

- Move nets just inside faceoff dot
- Undo curved panel securing bolt to allow pull apart in middle
- Always push against other end to avoid boards coming apart
- Turn 90° so boards are just inside faceoff dots (room for 2 Olympia passes)
- Pushing against each other slide boards over to flooded area once two passes completed

Move During Ice Flood

Notes

- PUSH AGAINST EACH OTHER
- OTHER
- Slide boards over to flooded area once two passes completed
- Remember to move nets out of the way of Olympia

Set Up after Ice Flood

Notes

- Pushing against each other while one person turns slide boards 90° back to red line
- Push middle a few feet past red line to make attaching to other side easier
- Do the same thing to other side, attaching middle two panels near center
- You may need to unattach a curved panel to get enough room for two sides to fit together

Loading Cart when Finished

Notes

- Start by removing small panel and set aside
- Put long panels on first
- Lift end onto cart and push with male insert
- Use pin on cart to hold boards in place
- Third person to secure panels and stop cart from moving
- Small panel goes on after all long panels loaded
- Order of curved panels nested into each other:
Small
Large
Small
Large

Using Gate

Additional Notes

- FCA suggest at least 3 volunteers on the ice to set up divider system
- Volunteers on skates with helmets on
- When moving system for floods always remember to push against each other to stop boards from coming apart
- When removing panels from cart pull from end with male insert
- When placing panels back on cart push with male end insert
